

ZymeAway

America's Leading Natural Green Enzyme Cleaner

General Cleaning Instructions

Remember one important FACT. All indoor dirt and debris is similar in all the rooms within your home. With the exception of food and drink spills, the dirt remains the same. You do not need specific cleaners specially targeted and marketed for each room or each cleaning job. ZymeAway® is a perfectly formulated and balanced cleaner designed to clean from the kitchen to the bathroom and from the garage to the patio. Save \$100s per year on unnecessary and harsh chemical cleaners. Whether cleaning indoors or out, you can count on ZymeAway® to clean away all unwanted dirt and debris.

All Interior Cleaning: 2-oz of concentrate per gallon of water mixture

Kitchens and Bathrooms, Ceramic Tile & Grout Marble, Granite & Composites,

Stainless Steel & Metals, Utility and Laundry Rooms, Dining and Living Rooms,

Recreation and Family Rooms, Basements and Crawl Spaces, Washable Wallpaper & Paneling

All Exterior Cleaning: 4-ozs of concentrate per gallon of water mixture

Decks, Fences and Patios Brick, Stone and Concrete Vinyl, Aluminum & Wood
Plastics and Mixed Materials BBQ-Grills & Stoves Outdoor Furniture & Fixtures

Any material outdoors that is washable is easily and completely cleaned by following the directions. You may need to repeat the cleaning process if the material has been exposed to prolonged sunlight or changing weather conditions. Enzymes will clean all "organic" matter or material from all washable surfaces!

Water Leaks and Major Floodwater Cleanup Projects:

When cleaning any interior flooded space, always insure you protect your face and skin.

IMPORTANT: *Wear proper personal protective equipment;* professionally rated face mask with canisters appropriate for the floodwater condition, always use non-porous goggles to prevent entrance into the eyes, and wear ear plugs to prevent entrance into the head, and protect your hands with appropriate hand gloves for the type of cleaning project you have. You can purchase these items from your local hardware store or any big box store like Lowe's or Home Depot. Do not take any chances with your health while cleaning potentially harmful or hazardous floodwater environments.

NOTE: The clothing you wear during the cleaning projects can safely and effectively be washed in 4-ounces of ZymeAway® concentrate into hot tap water as follows; Place clothing into utility sink or bathtub and 4-ozs of concentrate into hot tap water and soak the clothing for 2-hours – occasionally stirring or mixing them to insure that all fabric is exposed to the enzymes in ZymeAway®. **NOTE:** Even in a bathtub, you will not need more than 4-ounces of ZymeAway® concentrate. After soaking for 2-hours, simply rinse clothing in clean water and wash in washing machine as normal. For general purpose laundry cleaning, mix 2-ounces of ZymeAway® concentrate into 1-gallon of water, and pour 1-cup of pre-mixed solution into laundry water. You do not need commercial laundry detergents or chemical cleaners... simply use ZymeAway®.

Next, to clean indoor floodwater spaces, use a hand-pump sprayer or power-washer or fogger (depending on the indoor surface material and drain system available) and always use a mix of 4-ounces of ZymeAway® concentrate into each gallon of water used for your floodwater cleaning project.

Directions for all flood cleaning: First, put on all Proper Protective Equipment (PPE)

1. Fill hand-pump sprayer, power-washer or fogging machine reservoir with 4-ounce ZymeAway® mixture and liberally spray over all flooded surface area – it's best to work in 10 foot segments at a time from top to bottom and;
2. Using a soft to medium bristled long-handled brush, brush mixture into surface debris for approximately 2 to 3 seconds per brush width area... and next;

3. Allow this brushed mixture to sit and stay in contact with the surface for 5 to 10 minutes. If you allow it to dry, simply wet surface quickly again. This dwell time is very critical to allow the enzymes in ZymeAway® to begin to work at breaking down and dislodging all biological debris and matter on surfaces.
4. Rinse and/or HEPA Vacuum (High Efficiency Particulate Arresting Filter) all surfaces clean from any particulate that remains after the cleaning process. NOTE: For best hygienic (thorough healthful cleaning) results rinse surfaces down completely with fresh clean water.
5. NOTE: When rinsing ZymeAway® off surfaces and allowing it to flow down drains, it will provide additional cleaning within the drain by assisting in dislodging caked debris located against pipe walls.
6. NEVER MIX ZymeAway® WITH ANY CHEMICALS OR BLEACH PRODUCTS – IT WILL DESTROY THE ENZYME ACTIVITY AND ENERGY.

WHAT ARE ENZYMES?

Enzymes are a natural part of our world, and play a vital role in everyday life. Enzymes are found in every living organism on earth, and life as we know it - simply would not be possible without enzymes.

Enzymes are nature's natural catalysts – but are not a living organism. Enzymes are a living energy. Enzymes cause a natural energy exchange reaction to occur many times faster such as breaking down dirt, debris and organic matter. Enzymes use "energy releases" to break apart and break down biological matter as opposed to harsh and toxic chemical cleaners that simply dilute the dirty surfaces and debris, but do nothing to break down the target matter.

ZymeAway® enzymes are all natural plant-based enzymes, and do not contain any harmful chemicals. It is non-toxic, non-caustic and non-flammable. ZymeAway® is environmentally friendly and instantly biodegradable and will actually help in cleaning away sludge, bio-wastes and toxic by-products from many manufacturing industries and processes.

ZymeAway® is a Medical Grade formula that has been successfully used since 1999 in the medical and dental industries. ZymeAway® is safe to people, pets, plants and our environment.
